-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 21-29 and 32-54 are rejected under 35 U.S.C. 103(a) as being unpatentable over Friedman (2,313,060) in view of Kinney (4,136,720), Gundlach et al (2,284,651), French et al (6,284,294) and Mannara (3,952,782) for the reasons given in the last Office action mailed March 31, 2004 and November 8, 2004, further in view of Crowder (3,971,853).

Claim 21 now further recites the structure of the apparatus in relation to the manipulative steps. As now shown by newly cited Crowder, applicant is not the first to create composite foods wherein one component is introduced into a flowing stream of a second component in a direction that is against the flow of the second component (albeit the one component is added to the outer surface of the second component). However, the art taken as a whole already teaches flowing one component into a second component interiorly through ducts. Crowder fairly teaches the orientation of the interior ducts of the prior art could be against the flow (i.e. at an acute angle), since that is what is shown in Figures 2 and 2A.

Applicant's comments have been fully and carefully considered but are seen to be moot in view of the new ground of rejection.
